                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC This invention describes a novel C-terminal fragment (I) of an isolated prolactin-releasing peptide (PPRP), referred to as PPRP20 and having a CC sequence (S1). The invention also describes (1) a therapeutic composition (I) or a C-terminal fragment of PPRP referred to as PPRP8 (C1) comprising (I) or a C-terminal fragment of PPRP referred to as PPRP8 (C2) and comprising a sequence (S2); (2) a diagnostic method based on antisera against PPRP20 for identification of disorders involving the central nervous system, including those associated with pain or autonomic CC domains of PPRP is used to identify alterations in PPRP synthesis or CC levels; (3) a rat or human receptor encoded by a 1122 nucleotide sequence (S3), fully defined in the specification; (4) treating a person suffering CC in a disorder regulated by a receptor (II) encoded by a sequence of CC 1122 nucleotide sequence, fully defined in the specification, located in the receptor; and (5) treating blood pressure, by blocking of receptors of PPRP or its C-terminal fragment GlyTleArgProvalGlyArgPhe NH_2 (S2). CC of PPRP or its C-terminal fragment GlyTleArgProvalGlyArgPhe NH_2 (S2). CC (I) is useful for regulating autonomic functions, such as increasing CC blood pressure. (I) is useful for treating pain, for manufacturing a conductor of (II) are useful for treating pain, inflammatory conducts of the hlood pressure, and for treating pain. Agonist conductions and neuropathic pain, for regulating autonomic functions and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

CC GPRIO (human) or UHF-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant to ligand polypeptide. The ligand polypeptide, and its fragments, modulate to the polypeptide to the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, ce.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's cissaes; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; cidabetes; schizophrenia; disorders of growth hormone secretion; cancer; rheumatoid arthritis, epilepsy and many others, also to improve post-corrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide encoding DNA or its models of cissaese, for drug screening and as source of cell lines. The ligand completed sequences; in receptor-binding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and continues which can be used for the preparation of anti-ligand polypeptide encoding the preparation of an

Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                 pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; eacromegaly; Chiari-Frommel syndrome; argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; Choriocarcinoma; hydatid mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia; prolactin secretion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein-coupled receptor protein. This peptide is used as an antigen to prepare rabbit anti-bovine 1972-L31 antibodies which are used in binding assays. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hornone secretory disease, because the property and polymeria.
                                                                                                                                                 Synthetic.
                                                                                                                                                                                                                                                                                                                     G protein-coupled receptor; GPCR; hypoovarianism; gonecyst cacogenesis;

The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricoarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAM97229-31 represent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a grottein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, genecyst cacegenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimune disease, prolactioma,
                                                                                                                                                                                                                                                                                               19P2 ligand
                                                                                                                                                                                                                                                                                                                                                                                        AAY49293 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central mervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. sequences AAX49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

                    ilgand polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor control binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. A central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, crauma, growth hormone secretory disease, hyper-and polyphagia, hyperprolactinaemia, hypercholeasterolaemia, hyperglyceridaemia, spinal injury, cransient brain ischaemia, spilapsy, amylotrophic lateral scherosis, athma, rheumatoid arthritis, spinal injury, cransient brain ischaemia, spilapsy, amylotrophic lateral scherosis, actute myocardial infarction, infertility, spinocerebellar degeneration, coligogalactia. Assays can also be dermatitis, osteoporosis and/or capable of altering the binding activity of the ligand affecting cactivation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

AAW31387
                                       This sequence represents a peptide fragment from a novel rat type CC ligand polypeptide corresponding to amino acid residues 33 to 52 of the CC sequence represented in AAW31383 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a central nervous system modulator or a pancreatic function CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, coute myocardial infarction, infertility, spinocerebellar degeneration, CC bone fracture, trauma, atopic dermatitis, osteoporosis and/or colloqualactia, Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-SEP-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW31374
                                                                                           sequence in Awaliss and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, therefore of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia. Thyperrolactinaemia, hyperglyceridaemia, hyperlipidaemia, hyperplycatics, renal disease, hyper-rolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperrolactinaemia, neurosis, rheumahoid arrhitis, spinal injury, trauma, atopic dermatitis, osteoporosis, asthma, pellepsy, infertility and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                    prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for medulating placental function can be used for treating or preventing modulating placental function can be used for treating or preventing
                                                                                                                                                                                                                                                                                              treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a bovine pituitary-derived ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises iligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for the protein of the secretion can be used for the secretion of the secretion can be used for the secretion of the secretion can be used for the secretion of the secretio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilio syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism;

                                                                                                                                                                                 is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodistac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; abortion; unthrifty fetus; abnormal saccharometabolism; becomes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW97234 standard; peptide;
                                                                                                                                      The inhibitory agents can also be used as contraceptives. The agents modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty for
                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

                             is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a cliqand polypeptide or a salt, for a c protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting clactation in a domestic mammal and as an aphrodisiac. The agents for privalitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, coromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, CC probes Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing characteristing placental function can be used for treating or preventing characteristing placental function can be used for treating or preventing characteristics, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                G protein-coupled receptor; GPCR; hypocvarianism; gonecyst cacogenesis; menopausal syndrome; eurbyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.

                            The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC fusuus and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; schizophrenia; disorders of growth hormone secretion; cancer; CC creative nutrilional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide sequences; in receptor-binding assays; for production of Ab and CC animals. The present sequence represents a bovine genome-derived ligand CC animals. The present sequence represents a bovine genome-derived ligand CC polypeptide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GPR10; UHR-1; modulator; pituitary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug; Creutzfeld-Jakob disease; poisoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide ligand for orphan G protein coupled receptors - used for treating disorders of central nervous system, pituitary and pancreas, and for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW95191 standard; peptide; 20

                                                                                                            The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide. The ligand DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease, for drug screening and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to CC disease, for drug screening and as source of cell lines. The ligand CC disease, for drug screening and as source of cell lines. The ligand CC disease, in drug development; for gene therapy and to develop the function of Ab and CC centories which can be used for the preparation of anti-ligand relugantion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Local Similarity

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
